

**“An exterior up-fit on a large working hospital presented a set of challenges you don’t have to deal with in new construction. We had to juggle tight production timelines, constant inspections, testing of materials, and safety of our masons and hospital customers. This project was a huge success for Carilion, Avis Construction, and Marshall Stone.”** – Brian Ferguson, Project Manager – Marshall Stone Inc.

**PROJECT LOCATION:** Radford, VA

**PRODUCTS:** Adhered Concrete Masonry Veneer

**PROJECT DESCRIPTION:** The existing exterior cladding installed by a mason several years prior had failed and was falling off of the building. Marshall Stone found a product to closely match the look desired, assisted in the specification process of installation related accessories, and re-installed the stone in 13 phases over a one year period; all while the hospital was in full operation. Each phase was completed on time. All stone was required to be installed in strict accordance with MVMA guidelines. Marshall Stone had to coordinate extensively through the entire project with the general contractor and other sub-contractors to insure timely and smooth execution of the re-cladding. Safety was paramount on this project, as it is on any job, but presented unique challenges in that the hospital customers were accessing hospital entrances in very close proximity to the areas in which work was being completed.
